

SM 2200

IP Based Fingerprint Access Control & Time Attendance

The SM 2200 is an IP based fingerprint terminal works both in network and standalone modes. In network mode, it can connect with SMART software for access control and time attendance management.

Wiegand output makes SM 2200 flexible to connect with SMART or any 3rd party controllers as a slave reader. Additionally wiegand input allows two units of SM 2200 to configure with each other and utilize Master & Slave solution, which requires user verification at both entrance and exit. Meanwhile, anti-passback function can be used to maximize the security.

Auxiliary input interface allows SM 2200 to connect with an external source, for instance, a smoke detector or emergency switch. Once the linkage function is enabled through the machine menu, the device would generate an alarm signal and open the door in case of emergency.
