

Smart1200

Product Description

Smart1200 is an IP65 rated outdoor ngerprint reader with RS485 communication interface. It works ideally with biometric multi-door access controllers, such as inBIO Series, but also with standalone access control terminals, such as the F8. Essentially a slave reader, it captures and transfers ngerprint templates to the master panel for verification. With its safe communication protocol and rugged structure, Smart1200 offers complete anti-vandal security and extra durability in all outdoor weather conditions.
